NURSEED®HC

NURSEED®HC is a seed-applied Signal Molecule technology designed to drive stronger establishment and more consistent crop performance from day one. It provides full crop cycle enhancement: boosted emergence, stronger vigour, improved stress tolerance and maximising yield potential.

PROVEN FIELD PERFORMANCE

TRUSTED GLOBALLY
Backed by 1,000+ trials worldwide across diverse climates and crops.

CONSISTENT, RELIABLE, REPRODUCIBLE
With value driven by improved consistency and reduced variability.

WHY NURSEED®HC?

- PROVEN ACROSS ROW CROPS AND HIGH-VALUE CROPS
- LOW DOSE RATE (1–6 ML/KG SEED)
- EXCELLENT ON-SEED STABILITY
- BIOBASED, PATENTED AND NON-TOXIC

HOW THE SIGNAL MOLECULE WORKS

Direct to the seed, priming key physiological pathways from germination onwards and enabling earlier activation and faster, more effective plant responses.

Plant primed → Plant response pathways activated → Plant protected

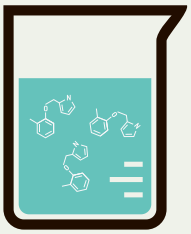

WHAT THIS MEANS IN THE FIELD

- FASTER AND MORE UNIFORM EMERGENCE
- STRONGER EARLY ROOT AND SHOOT DEVELOPMENT
- ENHANCED TOLERANCE TO ENVIRONMENTAL CONSTRAINTS
- MORE CONSISTENT PERFORMANCE ACROSS ENVIRONMENTS

Fyteko SA, Allée de la Recherche 4, 1070 Anderlecht, Belgium | www.fyteko.com | contact@fyteko.com

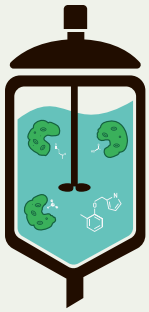

OUR PRODUCTION PROCESS

1 PLANT-DERIVED MONOMERS

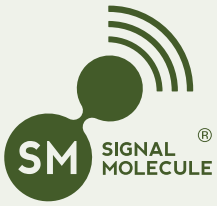

Selected and purified natural compounds

2 ENZYMATIC BIOCATALYSIS

Green chemistry process using highly selective enzymes

3 SIGNAL MOLECULE TECHNOLOGY

Well-defined characterized molecule with controlled composition and reproducible performance

4 COMMERCIAL PRODUCT

Stable, fully compatible with standard seed treatment chemistries and nutritional products

A DIFFERENT APPROACH TO BIOSTIMULATION

Unlike complex mixtures or crude extracts, NURSEED®HC is:

Defined Signal Molecule technology
HAO - Hydroxycinnamic acid oligomers

A clear mode of action

Consistent, reproducible, performance

TURNING PERFORMANCE INTO PROFIT
